CHOOSE YOUR DOME

Standard Go-Dome™

The first Go-Dome™ product, the one that put the company on the map in 2004, continues to be our best-selling product. It remains popular because of its versatility and portability, without compromising comfort, ease of use, or image quality.

How it works

As with the complete line of inflatable Go-Domes, the Standard Go-Dome™ uses positive pressure and a walk-in Go-Airlock™ door, and comes in blue or black cloth. A simple carpet fan inflates the dome and provides a constant supply of fresh air, keeping audiences comfortable while they are inside.

- Positive-pressure inflatable dome
- Walk-in Go-Airlock™ door
- Light-gray flocked interior
- Exterior in blue or black
- Light, quick to set up, and an assembly and library favorite
- Made for indoor use

4 m to 10 m | Blue or black | Assemblies & libraries | Custom sizes quoted

CHOOSE YOUR DOME

Go-Dome™ Ringed Domes

For a more traditional planetarium theater, rings give the dome a vertical wall below the hemispherical projection surface.

How to choose your rings

Each ring is about 30 cm (1 foot) tall. Inflated rings raise the spring line so heads and chairs stay out of the picture. One or two rings hold the dome diameter and add stability. Two rings add about 60 cm of wall height for extra headroom, a good choice for taller older students who will sit on the floor.

Choose 3 to 5 rings when you want a wall against which chairs can be placed. Ringed domes are heavier and less portable than the Standard Go-Dome™, and are ideal when a dome stays up for more than one day as a temporary theater in museums, malls, lobbies, or other public spaces.

Rings are permanently attached and cannot be added later to a Standard Go-Dome™. Standard sizes range from 4 m to 10 m.

- 1 to 5 inflated rings at the base
- Walk-in Go-Airlock™ door
- Exterior in blue or black
- Indoor use

4 m to 10 m | 1 to 5 rings | Museums & chair seating
